Telling Stories with Data

REVIEW

HISTORY

Meets Specifications

Greetings from Udacity,

Congratulations!

You've passed the project!! 🎉

I really appreciate the time and effort spent here in that awesome project!

I liked the level of detail used while creating your visualizations and the amazing clean structure of the PDF report. 🙌

I've added suggestions 💡 for further improvements.

From the skills shown here, I strongly recommend that you keep practicing your skills using the data-sets provided here...

<http://kaggle.com/>

<http://www.makeovermonday.co.uk/data/>

I wish you all the best in what's coming next.

Stay Safe,

Your Reviewer,

Visualization is Explanatory

The visualization centers on a specific, clear finding in the data.

The visualizations center on a specific, clear finding in the data because you've used the appropriate variables, aggregations and even created new measures using **Calculated Fields!**

The selected finding is clearly communicated. Design choices foster communication between the reader and the visualization.

Visualization does not add additional colors, shapes, or other design elements in an unnecessary way. Rather, each additional element should add to the insight being made.

Nice Design Choices!

Suggestions

1- Worksheet Size

- To take the advantage of the available space in your worksheet, please make sure that the size is set to **Entire View**. That will also be effective when you add the worksheets with **Entire View** size to Dashboards or Stories. As there won't be any blank space.

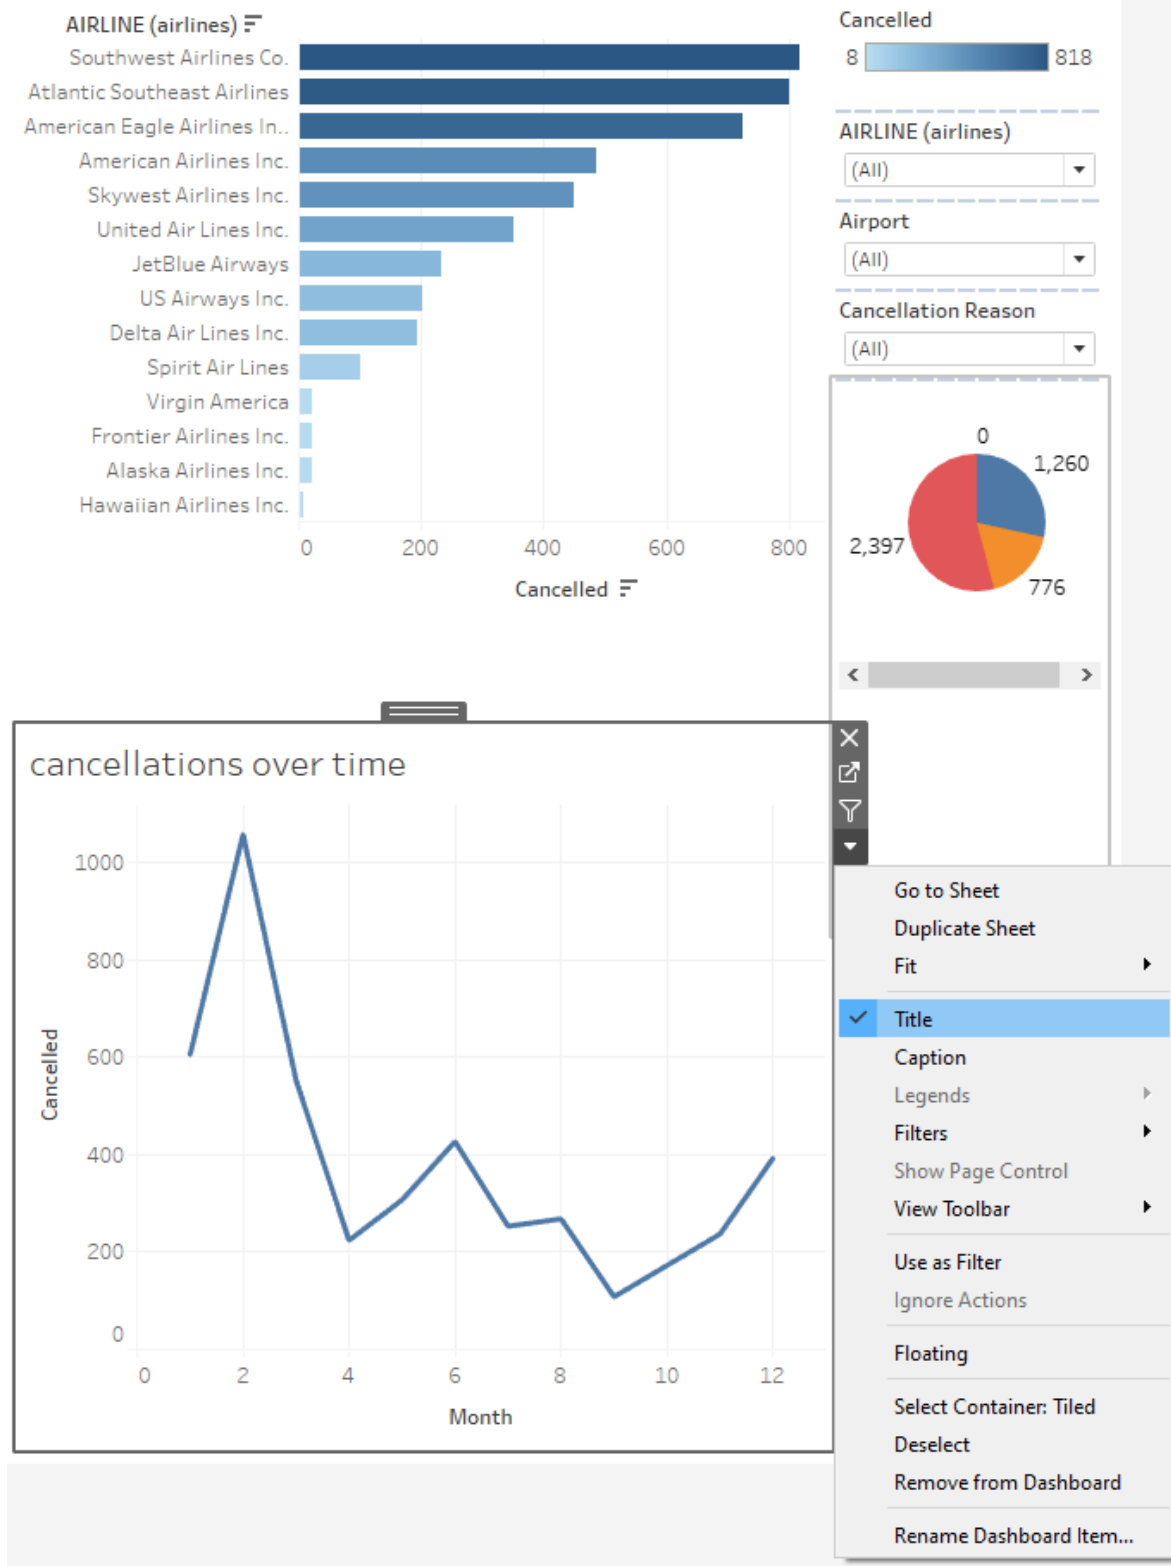

Cancellation Reasons

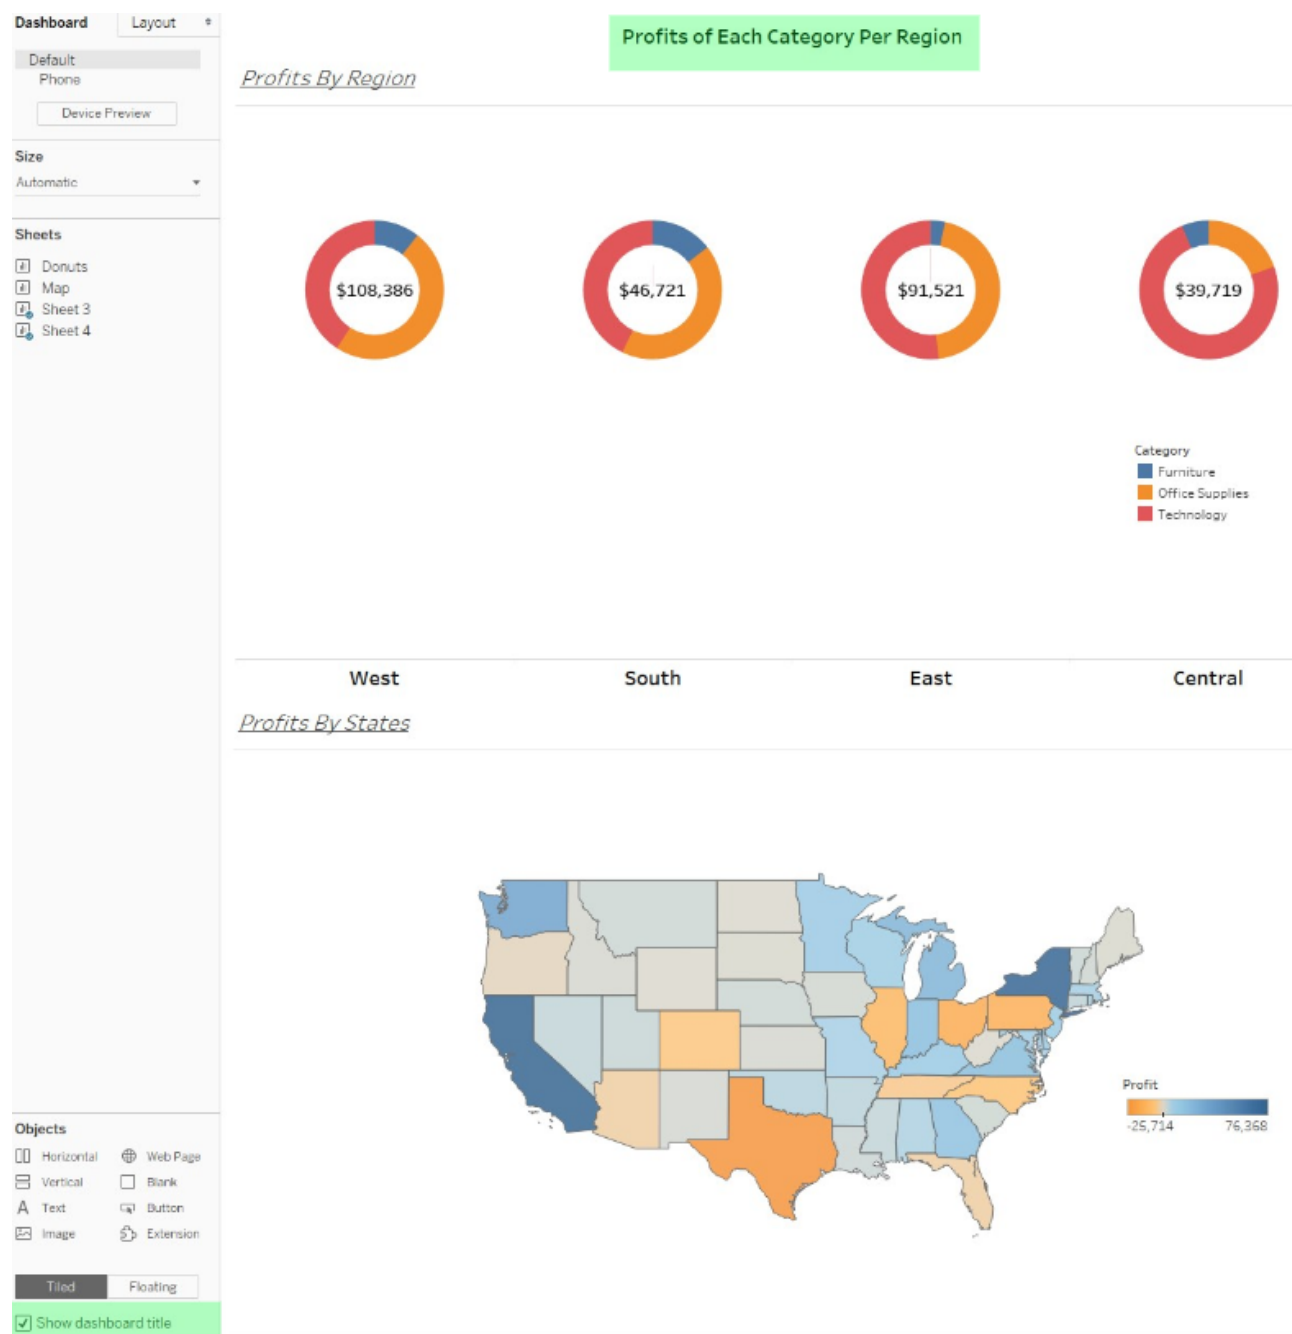

2- Dashboard Sub-Titles

- Please make sure to show **The Dashboard Sub-Titles** so that the viewers can understand the context of each visualization...

3- General Title

- Adding a **General Title** to your **Dashboard** will help your audience understand the **context** of your visualization.

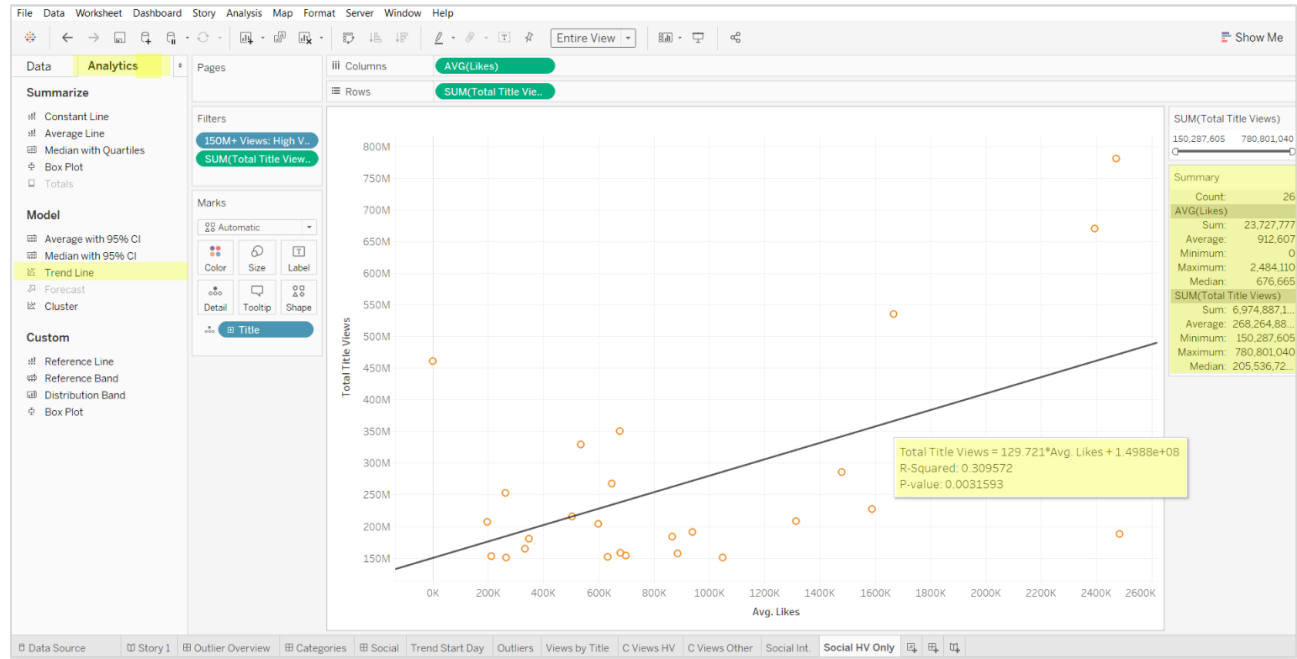

4- Map Formatting

- You can change how your map looks and show/hide some details using the tips provided here:
https://help.tableau.com/current/pro/desktop/en-us/maps_options.htm

5- Scatter Plot Trend Line.

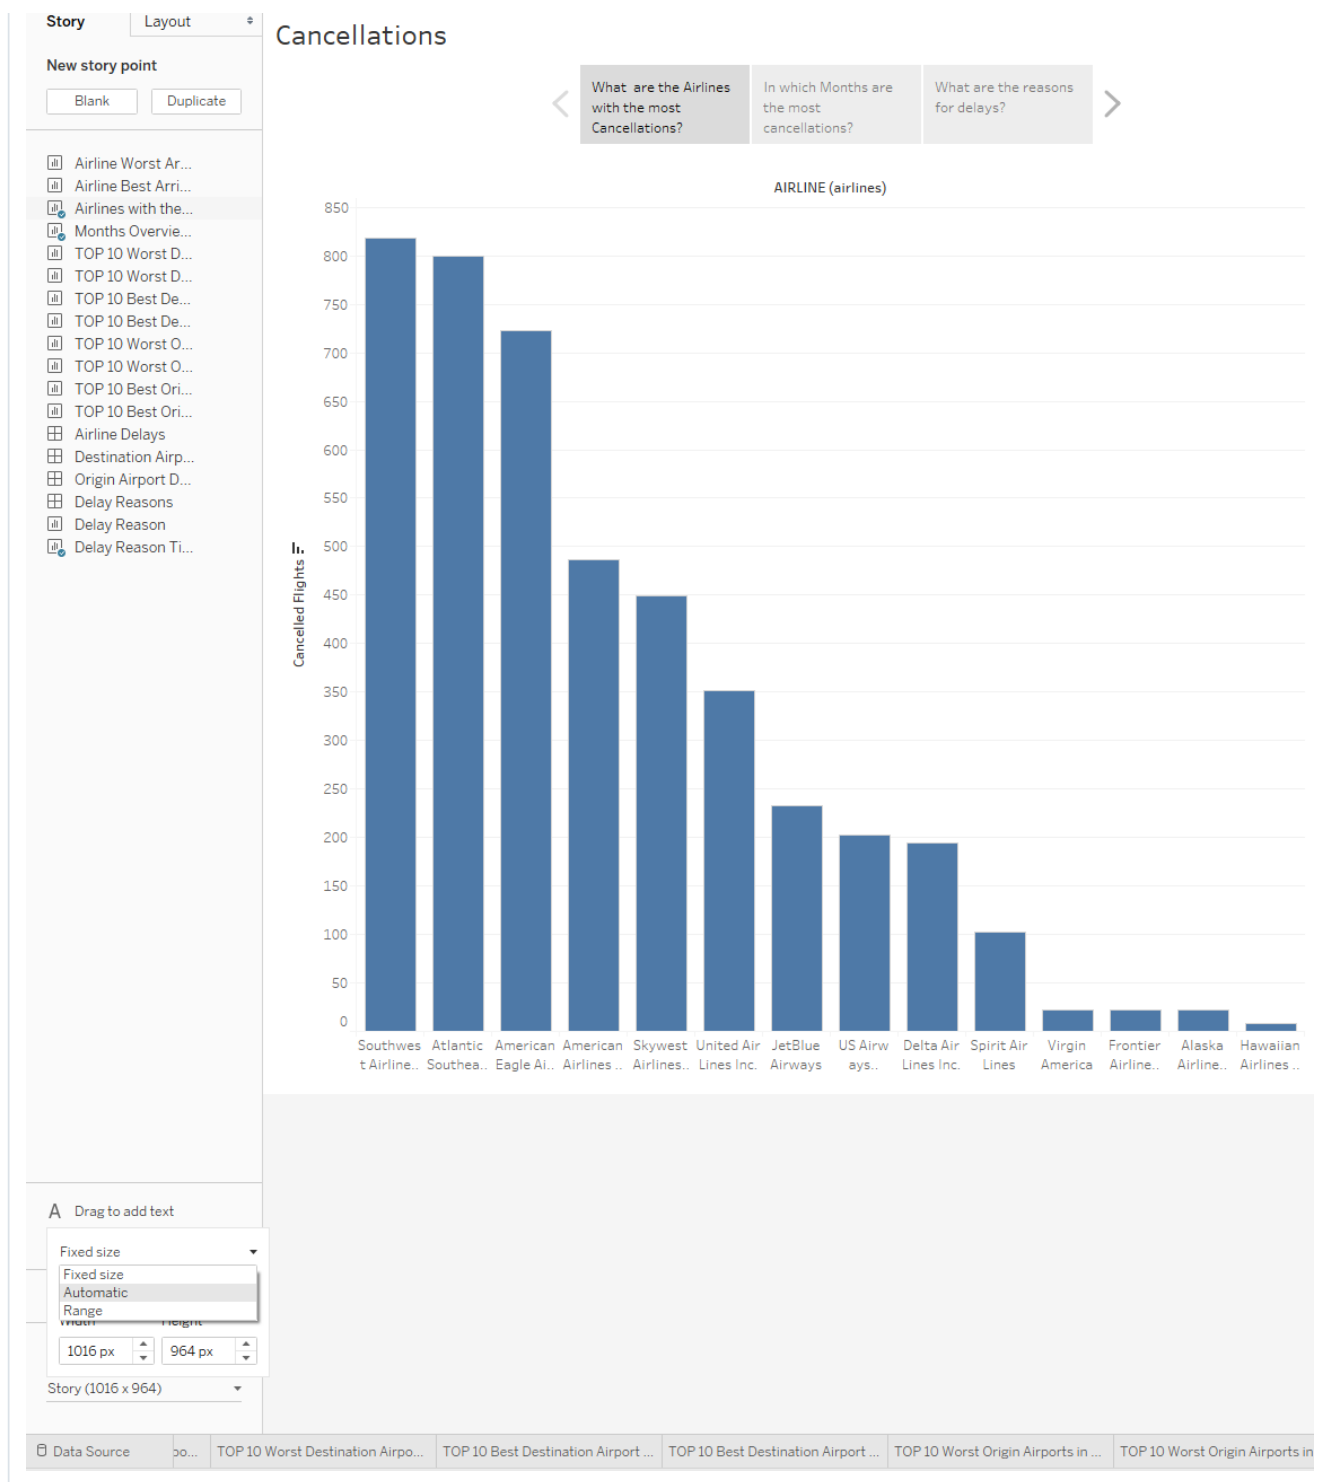

- You can add a Trend Line, Average Line or Even a Constant Line to the Scatter Plot so that It can be more informative.

Trend Line Example

6- Story Size

- We also recommend setting the story size to **Automatic**.

Design

The written summary should include a brief description of the visualization and state at least one finding.

A reader's summary of the graphic would closely match the written summary in the writeup, and a reader is able to identify at least one main point or relationship that the graphic attempts to convey.

To reiterate your report should include at least 3 sets of

- Link(s) to your dashboards or story

- **Summary:** brief description of the visualization and the main story or findings conveyed (please include an insight you are able to make from the visualization)
- **Design:** explain any design choices you made including changes to the visualization after collecting feedback
- **Resources:** list of Web sites, books, forums, blog posts, GitHub repositories etc that you referred to or used in this submission (Add N/A if you did not use such resources).

Great Job in adding all of the required details! ✓

The visualization includes interaction or animation. The inclusion of filters and additional variables shown in tool tip as appropriate within the visualization interaction are present.

At minimum you are required to include a filter in one visualization and you are required to include a tool tip in at least one visualization. You should strive to include these anywhere where they would benefit your visualization.

Great Job in using filtering by actions in the dashboards!

💡 More on Actions

- **Highlighters** add a lot of interactivity to your Dashboard. You can learn more on how to use it from [Here](#).

Color choices must accurately reflect the data and be chosen with accessibility in mind. For example, values that span from negative to positive numbers should be encoded with a diverging palette. Also, the color palettes should work for colorblindness.

Nice!

Your choice of colors is colorblind friendly. 👍

Now everyone of your audience can easily see and understand your visualizations. 🧑🧑🧑

💡 Pro Tip

- Avoiding Red & Green colors and diverging palettes is always a good practice to make your visualizations easily interpret-able by the colorblind.

Line plots for sequences, bar charts for categorical variables, etc.

You've used the right charts for the right insights. 🧐

Completeness

The three visualizations are included. These visualizations may be a single worksheet, but at least one must be a dashboard involving more than one worksheet. A dashboard counts as a single visualization. All visualizations must be clearly connected to a finding, and foster the interaction pieces (filters, colors, etc.) that allow for the finding to be found easily by a user.

One Dashboard is required. A Dashboard is an option in Tableau that allows you to combine multiple charts into one page. This counts as 1 visualization.

Two other unique visualizations are also required, These can be two single worksheets, two more dashboards, two more stories, or any combination of worksheet, dashboard, or story.

The visuals need to be saved to Tableau Public and the links to those visuals must be provided in the report along with the finding for each visual.

If you are unable to save to Tableau Public please include screenshots in your pdf report of each visualization. If you choose to use screenshots you should include at least one screenshot of your filters being used (a before and after picture of the visualization).

The insight(s) should be accurate and easily available from the filters and interactivity available in the visual.

Each visual must be appropriate for the particular data type. However, you cannot submit three bar charts, or three line charts. You should have a minimum of at least three different types of visuals across all of your turned in items.

3 Different types of charts required, here are some types you can choose

- Bar Chart
- Line Chart
- Scatter Chart
- Histogram
- Bubble Chart
- Map
- Area Chart
- Pie Chart
- etc
